+49 17667375104 [✉ bhuvandamodar04@gmail.com](mailto:bhuvandamodar04@gmail.com) [in Bhuvan Damodar A](#) [🌐 Portfolio Website](#)
📍 Stuttgart, Germany

Profile: M.Sc. Computer Science student at the University of Stuttgart with 3+ years of professional software engineering experience in backend development, microservices and automation, complemented by current applied machine-learning work at Mercedes-Benz. Experienced in Python, Java, distributed backend systems, data processing and production-oriented GenAI/RAG applications. Strong interest in building reliable, scalable software and AI-enabled systems for real-world engineering problems.

Technical Skills

Languages: Python, Java, SQL, TypeScript
Backend: FastAPI, Spring Boot, REST APIs, Kafka, SQLAlchemy
AI / ML: Machine Learning, Generative AI, RAG, Gemini API, Vector Embeddings, pgvector, Geometric Deep Learning concepts
Databases: PostgreSQL, SQL Server, MySQL
DevOps / Tools: Docker, GitHub Actions, CI/CD, Git, Linux, Kubernetes, Datadog
Cloud: AWS, Azure, Render, Vercel, Neon
Practices: Testing, Debugging, Agile/Scrum, Software Engineering Best Practices

Experience

WORKING STUDENT - FUTURE DIGITAL ENGINEERING <i>Mercedes-Benz AG</i>	Feb 2026 - Present <i>Stuttgart, Germany</i>
- Develop and enhance an internal Python/Tkinter engineering application, debugging existing functionality and implementing new features for simulation-related workflows. - Support research and development of machine-learning surrogate models for finite-element (FEM) crash simulations using Python and simulation data. - Process and analyse FEM mesh and crash-simulation data, including displacement, geometry, cross-sectional and physics-related features. - Investigate mesh- and graph-based learning approaches, including geometric deep learning and MeshGraphNet-style concepts, for learning from simulation meshes. - Contribute to model development and evaluation in collaboration with researchers, focusing on prediction quality and generalisation across simulation configurations.	
SENIOR SOFTWARE ENGINEER <i>Happiest Minds Technologies</i>	Aug 2022 - Jan 2025 <i>Bangalore, India</i>
- Built and deployed 10+ scalable microservices using Spring Boot and Kafka, reducing application latency by 25%. - Developed data-processing pipelines using PostgreSQL, SQL Server and Kafka Streams, with Datadog-based monitoring. - Created Python-based test automation scripts to validate microservices, improve reliability and accelerate release cycles. - Managed Docker and YAML-based application configurations and supported reliable deployment workflows. - Collaborated with cross-functional Agile teams to design maintainable backend architectures and deliver production features.	
SOFTWARE ENGINEER INTERN <i>Shiash Info Solutions Private Limited</i>	Aug 2021 - Dec 2021 <i>Remote</i>
- Developed and optimized Java applications with MySQL integration using JDBC, improving application data handling and backend functionality. - Debugged application issues and implemented SQL queries and database procedures to support real-world application requirements.	

Education

University of Stuttgart, Germany <i>Master of Science, Computer Science</i>	Apr 2025 - Present
Vidyavardhaka College of Engineering, India <i>Bachelor of Engineering, Computer Science</i>	Aug 2018 - Aug 2022

Projects

Briefly.ai — GenAI News Intelligence & RAG Platform (Mar 2026 – Sep 2026)

Python, FastAPI, PostgreSQL, pgvector, Gemini, Next.js, TypeScript, Docker, GitHub Actions

- Built and deployed a full-stack GenAI news intelligence platform that ingests content from 6+ curated AI/technology sources, generates structured insights with Google Gemini and delivers personalized daily briefings.
- Implemented a custom RAG pipeline using Gemini embeddings, PostgreSQL/pgvector and cosine-similarity retrieval, achieving 95% Hit@5 and 92.5% Recall@5 on a curated evaluation benchmark.
- Engineered production-oriented reliability with 90 automated tests, real PostgreSQL/pgvector integration testing, Docker, GitHub Actions CI, structured logging, pipeline telemetry and failure alerting.
- Developed secure feedback-driven personalization using signed expiring tokens and bounded 60-day adaptive tag-affinity scoring.

GitHub: github.com/BhuvanDamodar/ai-newsletter

Live Demo: briefly-ai-newsletter.vercel.app

Histopathologic Multi-Organ Cancer Detection in Lymph Node Tissues (Nov 2021 – Jun 2022)

- Developed a CNN-based deep-learning pipeline for detecting metastatic cancer in histopathology images using a dataset of approximately 198,000 samples.
- Implemented image preprocessing, normalization and augmentation pipelines for large-scale image classification.
- Evaluated classification performance using ROC-AUC, achieving 0.94 AUC.

Certifications

AWS EKS Kubernetes-Masterclass DevOps, Microservices

IBM Data Science

Languages

English C1

German A2 (currently progressing toward B1)
